## Personal Statment

---

Highly motivated Web Developer with some experience deploying programming languages (mainly Javascript), **looking to transition** into a **Junior Software Engineer** role and whiling to learn new technologies to suit the needs of the role.

## Key Skills

---

- HTML5
- CSS
- Javascript
- React
- REST APIs
- Data Structures and algorithms
- GitHub operations
- Advanced written and verbal Communicator
- Problem Solving
- Web Development

## Work Experience

---

### Frontend Simplified Bootcamp: Frontend Software Engineer July 2023 to Current

- Gained a deeper understanding of some of the technologies used for Software Engineering (specially frontend engineering)
- Built highly functional and user friendly applications with the use HTML5, CSS, Javascript and React.

### Freelance Web Developer January 2022 to July 2023

- Developed a highly functional e-commerce web application
- Gained basic understanding of HTML5 and CSS and also deployed these technologies.
- Implemented advanced SEO optimisation, including keyword optimisation, in order to increase traffic and improve chances of elevating the website's ranking to/on the first page of search results.

## Projects

---

### E-commerce Library Application | [Website](#) | [Github](#)

Full Stack Development

- Designed a user-friendly, mock e-commerce website that theoretically would allow users to seamlessly purchase their favourite books. All of the features/components on the website work impeccably, and with the degree of precision that would allow for the website to be launched with very little fine-tuning needed.

Note: There are other projects being worked on currently which have not been displayed here. The plan is to be able to display these projects as soon they are flawlessly executed to the best of my ability.

## Education & Qualifications

---

**Frontend Simplified Bootcamp (self paced)**  
**July 2023 - Current**
